CREATIVE BIOMART®
Assay Kit

Eosinophil Stain Kit (Sirius Red Method)

Product Information

Product Overview

Eosinophils are inflammatory cells involved in allergic diseases. Their cytoplasmic granules contain basic proteins that can be stained by acidic dyes.
This kit consists of hematoxylin, rinse solution, and picro-sirius red solution. After staining, eosinophil cytoplasm appears red and nuclei appear blue. Compared with other eosinophil staining methods, it provides stronger staining intensity and higher contrast, with a relatively longer staining time.

Size

3*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 6 months.
