CREATIVE BIOMART®
Assay Kit

Neutrophil Alkaline Phosphatase Stain Kit

Product Information

Product Overview

This kit uses the azo-coupling method rather than metal precipitation to demonstrate Alkaline Phosphatase activity. Under alkaline conditions (pH 9.2–9.8), Alkaline Phosphatase hydrolyzes AB-BI phosphate, producing colored azo compounds localized in the cytoplasm.
Designed for blood and bone marrow smears, this method provides more reliable results than traditional metal salt precipitation techniques.

Size

4*10 mL

Storage

Store at -20 °C, protected from light. Shelf life: 1 year.
