CREATIVE BIOMART®
Assay Kit

Nissl Stain Kit (Methylene Blue Method)

Product Information

Product Overview

Nissl bodies are basophilic granular structures in neuronal cytoplasm composed of rough endoplasmic reticulum and ribosomes. They stain blue-purple with basic dyes such as methylene blue.
This Nissl staining method offers simple operation, stable staining, and broad applicability to paraffin sections. Loss or dissolution of Nissl bodies is a key indicator of neuronal injury in conditions such as encephalitis, ischemia, and axonal reaction.

Size

3*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 6 months.
