CREATIVE BIOMART®
Assay Kit

Plant Tissue Stain Kit (Trypan Blue Method)

Product Information

Product Overview

Trypan blue is a vital dye widely used to distinguish live and dead cells and to assess damaged or necrotic plant tissues. It selectively stains non-viable cells and is also used for detecting fungal or pest-induced damage in plant tissues.
This staining method allows direct staining of fresh plant tissues without fixation and does not contain chloral hydrate. Damaged areas appear blue.

Size

2*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 6 months.
