CREATIVE BIOMART®
Assay Kit

Prussian Blue Iron Stain Kit (with Eosin)

Product Information

Product Overview

Prussian blue staining detects non-heme iron deposits by forming blue ferric ferrocyanide precipitates, commonly used for bone marrow, liver, spleen, and kidney tissues. This variant uses eosin as a cytoplasmic counterstain to improve tissue morphology visualization while retaining the blue iron deposits produced by the Prussian blue reaction.

Size

2*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 1 year.
