CREATIVE BIOMART®
Assay Kit

Prussian Blue Iron Stain Kit (with Nuclear Fast Red)

Product Information

Product Overview

Prussian blue staining detects non-heme iron deposits by forming blue ferric ferrocyanide precipitates, commonly used for bone marrow, liver, spleen, and kidney tissues. The method distinguishes hemosiderin from other pigments but has limited sensitivity for very low iron concentrations. Nuclear fast red is used as a classic counterstain to enhance morphological detail.

Size

2*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 1 year.
