CREATIVE BIOMART®
Assay Kit

Sperm Morphology Stain Kit (Shorr Method)

Product Information

Product Overview

WHO-recommended methods for sperm morphology assessment include Papanicolaou, Shorr, and Diff-Quik staining.
The Shorr method is based on principles similar to Papanicolaou staining, relying on differential binding of dyes to proteins with different isoelectric points. It is optimized for sperm morphology analysis and is also applicable to pleural effusion, ascites, and sputum cytology samples.

Size

3*20 mL

Storage

Store at room temperature, protected from light. Shelf life: 1 year.
