CREATIVE BIOMART®
Assay Kit

Spirochete Staining Kit (Levaditi Method)

Product Information

Product Overview

Spirochetes are spiral-shaped motile prokaryotes, including Treponema pallidum and Leptospira species.
This silver impregnation method visualizes spirochetes by reducing adsorbed silver ions to metallic silver, rendering organisms black. It is primarily used to detect T. pallidum and Leptospira in tissue sections.

Size

3*50 mL

Storage

Store at 2–8 °C, protected from light. Shelf life: 3 months.
