CREATIVE BIOMART®
Assay Kit

Tissue Iron Content Assay Kit

Product Information

Product Overview

The Tissue Iron Content Assay Kit is designed for the quantitative determination of total iron levels in tissue samples. Using a sensitive colorimetric reaction, iron released from tissues is converted into a measurable complex with a characteristic absorbance, allowing accurate analysis by spectrophotometry. This kit offers reliable performance, good reproducibility, and straightforward operation, making it suitable for studies of iron metabolism, iron accumulation, and iron-related pathological conditions in biomedical and physiological research.

Size

50t/48s

Storage

Store at 2–8 °C. Shelf life: 6 months.

Detection method Spectrophotometer
