CREATIVE BIOMART®
Assay Kit

Mallory's Trichrome Stain Kit

Product Information

Product Overview

Connective tissue staining refers to differential staining of collagen fibers, reticular fibers, and elastic fibers. Masson's trichrome staining is one of the most classic and authoritative methods for collagen fiber visualization.
Mallory trichrome staining is a simplified and modified trichrome method that omits a separate nuclear staining step, allowing rapid differentiation between collagen fibers and muscle fibers. As a fast staining formulation designed for fixed specimens, preliminary optimization experiments are recommended prior to batch staining to achieve optimal results.

Size

3*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 1 year.
