CREATIVE BIOMART®
Assay Kit

Masson's Trichrome Stain Kit (Fast Green FCF Method)

Product Information

Product Overview

The Masson's Trichrome Stain Kit (Fast Green FCF Method) is designed for differential staining of connective tissue components in histological sections. Using Fast Green FCF as the collagen counterstain, this kit clearly distinguishes collagen fibers from muscle fibers, cytoplasm, and nuclei, enabling precise visualization of tissue architecture. Collagen fibers are stained green, muscle fibers and cytoplasm appear red, and nuclei are stained dark, providing high contrast and excellent structural detail. The kit offers reliable staining performance, good color differentiation, and reproducible results, making it suitable for routine histopathological analysis and research applications involving fibrosis, tissue remodeling, and connective tissue evaluation.

Size

7*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 1 year.
