CREATIVE BIOMART®
Assay Kit

Metachromatic Granules Stain Kit (Modified Albert Method)

Product Information

Product Overview

The Albert staining method is commonly used for demonstrating metachromatic granules in Corynebacterium diphtheriae. The bacteria are Gram-positive rods that often arrange in V-, L-, or Y-shaped patterns.
After staining, metachromatic granules appear dark blue, while bacterial cytoplasm appears light blue, providing clear contrast.

Size

2*50 mL

Storage

Store at room temperature, protected from light. Shelf life: 6 months.
