CREATIVE BIOMART®
Assay Kit

Protein A Residual Detection ELISA Kit PLUS

Product Information

Applications

- Monitoring Protein A leaching during antibody purification processes
- Release and in-process testing of monoclonal antibody drug products
- Process validation and clearance studies in downstream bioprocessing
- Support for IND and BLA filing data packages

Product Overview

This kit is designed for quantitative analysis of Protein A impurities in biopharmaceutical products. It detects both natural Protein A and recombinant Protein A variants, including alkali-resistant recombinant variants. The PLUS formulation offers an extended linear range and enhanced sensitivity for demanding analytical applications.

Features & Benefits

- Broad detection spectrum covers natural and engineered recombinant Protein A variants
- Extended dynamic range reduces the need for repeat dilutions
- High sensitivity supports detection of trace-level residuals per regulatory guidelines
- Compatible with samples derived from commonly used affinity purification resins
